PROFESSIONAL SUMMARY

Senior Java Backend Engineer with 4 years of experience architecting scalable microservices, REST APIs, distributed data systems, and cloud-native applications using Java, Spring Boot, and Kubernetes (AKS). Proven expertise in containerized deployments, relational and time-series databases, high-throughput batch ingestion, and security vulnerability remediation. Serving notice period and open to immediate opportunities in Bengaluru or remote.

CORE SKILLS

- **Languages & Core:** Java, SQL, Multithreading & Concurrency, Data Structures & Algorithms, SOLID Principles & Design Patterns
- **Frameworks & Architecture:** Spring Boot, Spring AI, Hibernate / JPA, Microservices, RESTful APIs, Distributed Systems, Model Context Protocol (MCP)
- **Databases & Storage:** Relational Databases (PostgreSQL, MySQL), QuestDB, InfluxDB, OpenTSDB, Redis, Amazon S3
- **Cloud & DevOps:** Docker, Kubernetes (AKS), Helm, Vulnerability Remediation & Patching
- **Messaging & Middleware:** Apache Kafka, RabbitMQ, MQTT
- **Developer Tools:** Git, Maven, Postman, Swagger, Nginx, AI Coding Assistant Tools

WORK EXPERIENCE

Accenture — Bengaluru, India

Senior Java Backend Engineer | 11/2023 – Present (Serving Notice Period)

- Architected and developed scalable Spring Boot microservices using Java for enterprise-scale distributed applications.
- Built and maintained RESTful APIs consumed across internal microservices and frontend web applications.
- Developed full-stack UI features using Angular to render dynamic data profiling tables and interactive time-series charts.
- Engineered high-throughput Java batch ingestion frameworks processing millions of daily IoT sensor records into OpenTSDB.
- Managed platform setup, Docker containerization, Kubernetes manifests, and Helm chart configurations across Azure Kubernetes Service (AKS).
- Conducted continuous vulnerability scanning, security patching, and vulnerability remediation across microservice deployments.
- Applied multithreading and concurrency principles to optimize large-scale data processing workflows and query executions.
- Engineered backend components integrating AWS Bedrock and Azure OpenAI for scalable document processing workflows.
- Performed production support, root-cause analysis (RCA), and backend performance tuning.
- Leveraged AI coding and debugging tools to accelerate feature delivery, refactoring, and defect isolation.

Flutura Analytics — Bengaluru, India

Java Backend Developer | 10/2022 – 11/2023

- Developed reusable backend services, generic Java security libraries, and data connectors integrated across multiple internal products.
- Built a metadata-driven Java templating engine for report generation, converting XML/JSON metadata into formatted documents and reducing execution effort from 3 months to under 5 minutes.
- Designed and implemented pluggable data-source connector frameworks supporting relational databases and cloud storage drivers.
- Engineered an enterprise-grade Java security library integrating Azure Key Vault, HashiCorp Vault, and AWS KMS to eliminate hardcoded credentials.
- Applied SOLID principles and GoF Design Patterns to refactor legacy monolithic components into modular backend services.
- Participated in CI/CD pipeline setups, deployment workflows, production debugging, and performance optimization.

EDUCATION

Bachelor of Technology (Honors) — Computer Science & Engineering

APJ Abdul Kalam Technological University, Kerala | CGPA: 9.02 / 10

LANGUAGES

English, Malayalam
